Choose wisely

Complete milk replacers
for puppies and kittens

FROM THE FIRST DAYS OF LIFE

Complete milk replacers for puppies and kittens

Including feeding accessories

Without feeding accessories

A complete milk replacers tailored specifically to the nutritional needs of puppies and kittens. They replace natural milk. They are very well tolerated by young organisms and can be administered from the first days of life. They provide essential nutrients, vitamins and minerals to support the development of pets.

PREBIOTICS

stimulate the growth of appropriate bacterial flora in the gastrointestinal tract, thus enhancing the natural immunity of the organism.

PROTEIN AND FAT

easily digestible and balanced protein and easily assimilable fat.

IRON

stimulate hematopoietic processes and collagen synthesis being of special importance in case of fast-growing breed pup bones.

TAURINE

is necessary for the proper functioning of the nervous system and the eyesight.

Preparations are intended for orphaned puppies and kittens from numerous litters or as a supplementary diet for animals after weaning. It is also recommended for lactating dogs and cats as a source of readily available nutrients, which are increasingly needed during lactation.
